

Cyber Risk and Insurance in Healthcare

Program Overview

Our presenter will consider the state of cyber risk in healthcare, discussing the different threats faced by organizations and where they come from (both inside and outside the organization). Trevor will talk about why the exposures are different in healthcare and how they continue to evolve as healthcare itself is changing, against the background of current legislation and litigation. Then he will consider the consequences of a data breach, its impact on the organization and how risk transfer through insurance is one important mechanism and response to protect the organization and its reputation.

From this program the audience will be able to better understand the cyber threats to healthcare organizations, the costs of a breach, and how insurance helps the organization to be prepared and to respond swiftly and efficiently.

Program Objectives

At the completion of this program, the participants will be able to:

- Identify the key threats to data security and privacy
- Discuss the evolution of cyber risk
- List the factors that make healthcare a different cyber risk
- Identify the various data privacy regulations and litigation trends that relate to healthcare
- Explain the consequences of a data breach
- Discuss how cyber insurance supports healthcare organizations in responding to breach, both in terms of liability and first party costs of response

About the Speaker

Trevor Weyland is an Area Senior Vice President in Gallagher's Healthcare and Cyber Practices and brings expertise in cyber liability for healthcare organizations of all types, including hospitals and integrated systems, health plans, physicians, and medical groups and managed care organizations. Trevor acts in both advisory and placement capacities, assisting clients to understand their exposures, and presenting those risks to insurers in the best and correct light, and then in designing, marketing and negotiating their insurance programs. Trevor has no real or perceived conflicts of interest that relate to this presentation.

Who Should Attend

Healthcare personnel interested in learning about current cyber threats to healthcare organizations, trends in litigation following data breaches, the consequences of a data breach, and how insurance risk transfer supports the organization's response.
